

INTEGRA'S GOLD PROCESSING PLANT DISMANTLED AHEAD OF SCHEDULE

- ❖ **100%-owned gold processing plant dismantled and removed from the New Celebration site one month ahead of schedule.**
- ❖ **Major components (ball mills, crushers) now in storage in Kalgoorlie ready for refurbishment.**
- ❖ **Structural steel, conveyors, pumps, agitators transported to site ready for refurbishment and installation.**

Integra Mining Limited (ASX: IGR – “Integra”) is pleased to report that the dismantling and removal of the Company's 100%-owned gold processing plant from the New Celebration site is now complete – one month ahead of the targeted completion date of 30 June 2008.

Major components such as ball mills and crusher units have been transported into storage in Kalgoorlie ready for refurbishment. Other components such as structural steel, conveyors, pumps, agitators and electrical control equipment have been transported to the Aldiss-Randalls site ready for refurbishment and installation.

Minor 'clean-up' activities remain to be completed at the New Celebration site, and Integra expects to apply in the near future for the release of a \$500,000 performance bond deposited by Integra pending satisfaction of the Company's obligations to remove the mill from the New Celebration site.

The dismantling and relocation of the gold processing plant forms an integral component of Integra's move towards gold production.

Yours sincerely,

Chris Cairns
Managing Director
